- Engaging Natural processes to create Sustainable gardens

PROFILE

Aesthetics have always driven my career choices. While my focus is specifically on garden, landscape and environment design, photography & film still linger as past passions for my creativity. Every site is a canvas on which to compose a landscape and to paint with plants. Nothing thrills me more than to transform a barren space into a beautiful, striking and memorable garden.

But there is more to it than that.

With the current Global Warming crisis, environmental management and water conservation are now critical issues that have to be addressed by every project. It is vital that we engage with nature to build healthy & robust ecosystems and gardens that celebrate a natural aesthetic.

16 years of in depth, hands on experience in all aspects of building and managing high-end residential gardens has prepared me well to meet these challenges. My gardens are not simply something pretty to look at, they are an investment, a reminder, and a call to action. My way of making a contribution to secure the future of generations to come.

DESIGN

- Classical, Contemporary, Relevant
- Determined by buildings
- Hard and soft Landscaping
- Revit plans and elevations
- 4 Dimensional framework

PRACTICE

- Team Player
- Living Ecosystem development
- Natural Gardening techniques
- Water wise planting and irrigation
- No Chemicals

PLANTS

- Hand Selected, value for money,
- Matched to conditions & space
- Placed and planted to optimize growth
- Resilient to climate change
- Highveld grassland and biodiversity
- Mature tree transplant specialist

ADDITIONAL

- Project Management
- Eco-pool water features
- Grey water recycling
- Garden Maintenance
- On site staff training
- Waste separation and recycling
